:Project Title and Introduction .1

:Project Name and Logo

ZoZo Tokens (ZOZO)

Introduction •

The cryptocurrency market has created numerous opportunities for investors, but it has also brought challenges like lack of security, sudden pumps and dumps, and unsupported projects that always pose a threat to retail investors

ZoZo Tokens aim to build a transparent, sustainable, and community-driven ecosystem. This project is not just another meme coin; it's a revolution in the meme coin world, striving to restore trust and security for retail investors

? "Why the name "ZoZo"

"ZoZo" is derived from ancient Asian legends, where it is known as an eternal spirit. Despite its mythical appearance, it embodies seriousness and an everlasting presence, just as ZoZo tokens are meant to stay alive forever and bring life to users' wallets

The "s" at the end of the token name is created to represent the always-present spirit of ZoZo

:Project Goals

- To offer a meme coin with real value that is not solely dependent on promotions
- To create security and stability for retail investors and prevent whale manipulation
- Long-term planning to preserve the value and sustainability of the project
- To create a sustainable financial ecosystem with smart control mechanisms

:Challenges in the Meme Coin Market .2

- Sudden pumps and dumps that harm retail investors
- Lack of transparency and trust in development teams
- Market manipulation by whales, leading to extreme price volatility
- Lack of long-term planning for the sustainable development of tokens

Solutions Provided by ZoZo .3

ZoZo Tokens offer a sustainable and smart economic model to solve the above issues, including

:Key Features of ZoZo

- Smart buy and sell limits to prevent pump and dump
- A reflection mechanism that rewards holders through transaction fees
- Smart token burning to control supply and increase the token's value by 0.1% every six months, with prior notifications, and to ensure that any disruptions will be handled by the network itself
- Liquidity pool (LP) locking and damage guarantee to protect retail investors
- A smart liquidity management system that controls transaction volumes based on liquidity

The liquidity provision (LP) mechanism is explained in the Tokenomics section

Special Feature: ZoZo Airdrop Rewards

:A unique initiative

!Damage Guarantee for Small Investors

According to the project's goals, a portion of the 1 billion allocated tokens will be reserved for loyal ZoZo holders based on .market conditions, community support, and project progress

To be eligible, holders must have at least \$10 worth of ZoZo tokens in their wallet for more than three months. Additionally, if someone incurs a financial loss of more than \$50 in the market and can provide valid proof through a .dedicated form on our website, we will manually review the claim

Once verified, for major financial losses (over 50% loss), we will gift 1,000 ZoZo tokens per month to their wallet, as long .as their ZoZo balance exceeds \$10

This damage compensation program will continue until the number of qualifying wallets reaches 1,000, after which it will .be permanently closed. There will be no Phase 2, as this is a one-time initiative to attract and support new investors

:Reward Eligibility

- .Hold at least \$5 worth of one of the recognized meme coins (Doge, Shiba, Pepe, Floki, Bonk) •
- .Join X (Twitter) and follow the official ZoZo token page •
- .Each wallet and individual can only register once •

:Reward Amount

- worth of meme coins → 1,000 ZoZo tokens \$5 •
- worth of meme coins → 10,000 ZoZo tokens \$10 •
- Over \$200 worth of meme coins → 500,000 ZoZo tokens •

.The reward tokens are completely free and tradable

Limited opportunity! However, if the community supports Phase 2, more wallets may be allocated. After the capacity of .100 wallets is filled, Phase 2 rewards will be announced

.More details are available on the relevant section of the website

Economic Model (Tokenomics) .4

:Total Supply and Initial Distribution

- tokens (non-mintable to prevent inflation) 5,000,000,000 •
- tokens for liquidity and initial trading 1,500,000,000 •
- tokens for rewarding holders and guaranteeing retail investors 1,000,000,000 •
- of the total tokens allocated to the owner for project needs 2% •

Currently, the token supply is secured in a wallet labeled as the treasury. This approach has been taken for ease of use in the early stages of the project. In the future, the tokens will be transferred to a secure multi-signature wallet. The .planned distribution of tokens is a serious and intentional part of our roadmap

:Supply and Liquidity Control Mechanism

- .Initially, a maximum of 1,500,000 tokens will be in circulation •
- .Once liquidity reaches \$1,000, 50% of the initial supply will be unlocked •
- .Once liquidity reaches \$3,000, 25% more of the initial supply will be released •

Transaction Limits & Liquidity Lock Mechanism

Smart Buy and Sell System

To ensure stability and protect the project from early manipulation, automatic transaction limits are implemented directly in the smart contract. These limits are dynamically adjusted based on the liquidity level:

- When liquidity is below \$1,000, the maximum buy/sell amount per transaction is approximately \$10.
- As liquidity increases to between \$1,000–\$5,000, the limit gradually increases to around \$20.
- Once liquidity surpasses \$5,000, the transaction cap may range between \$50–\$100.

- When liquidity reaches \$10,000 or the token is listed on two exchanges, all limits are removed automatically.

This system is fully autonomous and embedded into the smart contract logic.

Liquidity Lock Conditions

Because ZoZo is a community-driven project focused on real, organic value, liquidity is locked based on milestones:

- At \$1,000 liquidity, it will be locked for 1 year.
- At \$5,000 liquidity, it will be locked for 6 months.
- At \$10,000 liquidity, it will be locked for 4 years.

Note: The current whitepaper version contains a small error in the liquidity lock durations. This will be corrected in the next update

:Transaction Fee Details

Up to \$1,000 liquidity, transaction fees will be relatively high (10%), and after liquidity reaches \$1,000 to \$6,000, transaction fees will gradually decrease to 5%

These limits are part of a strategic plan for the sustainable growth of the project, not a restriction. All these processes are handled automatically within the smart contract to prevent irrational volatility

As liquidity decreases, transaction fees increase, and once liquidity exceeds \$6,000, fees will drop to their lowest point to facilitate smooth transactions

After each transaction, these fees will be allocated as part of the support and warranty program, protecting the meme coins they hold and compensating retail investors who have incurred losses in the market

Once liquidity exceeds \$50,000, transaction fees will remain at their lowest level

ZoZo Token, in celebration of its launch and to support the meme coin community, is running a special reward program for loyal users. In this program, the first 100 wallets that meet the required conditions will receive ZoZo tokens as gifts, with the conditions being the same as holding the mentioned meme tokens

Security and Technical Structure .5

:Blockchain and Smart Contracts

Network: Binance Smart Chain (BSC) •

Smart Contracts: Automatic management of supply and demand, reward distribution, token burning, and transaction security •

:Project Security

Use of advanced cryptographic algorithms to prevent cyberattacks •

Mechanisms to prevent 51% and DoS attacks •

Ongoing review and updates of smart contracts to optimize performance •

Future Plans (DeFi, NFT, and Games) .6

:DeFi and Staking Plans

Staking and yield farming are planned for future phases •

DeFi programs, staking, and even mining will be fully operational by mid-2027 •

:Entering the World of NFTs and Blockchain Games

Early 2026: Launch of the unique ZoZo NFT collection •

Mid-2027: Development of casual blockchain games •

Late 2027: Expansion into the ZoZo Metaverse gaming ecosystem •

Exchange Listing Strategy .7

- .Immediate listing on DEX platforms (such as PancakeSwap) after token approval on Binance •
- .Listing on most decentralized exchanges within the first 6 months •
- .Listing on at least 3 centralized exchanges within 6 months to 1 year •
- .By the second year, the goal is to list on 3 major global exchanges •

Community Building and Marketing .8

- .Collaborating with crypto influencers and running marketing campaigns if necessary •
- .Hosting competitions, airdrops, and promotional events to strengthen community engagement •
- .Content creation on social media (Instagram, Twitter, YouTube, Telegram, and Threads) after the initial phases •
- .Launching a DAO (Decentralized Autonomous Organization) for community decision-making •

Conclusion and Final Goal .9

- .ZoZo is not just a token; it is a sustainable financial ecosystem designed to support retail investors
- .Security and stability: Preventing sudden pump and dumps •
- .Long-term planning: Token burning and liquidity control to preserve value •
- .Community-driven: ZoZo will be managed based on community participation •

Our Team

ZoZo is built by a small, independent team of two anonymous brothers—driven by a shared vision to revolutionize the meme coin space. Inspired by the ethos of Bitcoin and the anonymity of Satoshi Nakamoto, our focus is not on personal identity, but on delivering innovation, decentralization, and real value to the crypto community.

- Lead Developer & Project Manager

Senior Blockchain Engineer with 8 years of experience in decentralized systems, smart contract development, and tokenomics design. Responsible for leading technical strategy and implementation.

- Strategic Lead & Public Relations

Blockchain Engineer with 6 years of experience in project coordination and community growth. Focused on strategic direction, communication, and ecosystem expansion.

We believe that remaining anonymous allows us to stay fully focused on the mission—empowering users, maintaining decentralization, and staying aligned with the true spirit of crypto.

!ZoZo is here to pave a new path for meme coins. This is not just a project; it's a revolution
